

NEW GRINDS

Powering Australia's **TOUGHEST HOLDEN V8s** for over 30 years!

Since 1976, when Crane Cams developed the first US manufactured Holden Cams that were extensively dyno tested in the USA, Crane has continued to develop the most powerful and reliable Holden performance Camshafts. Evidenced by the fact Holden Engine Company turned to Crane to supply all of the V8 Camshafts for the VT Holden right through to the end of production. You know choosing Crane Camshafts and components you are getting the finest products available, backed up by direct factory support.

The Cams listed are just a small part of our stocked grinds and we custom order Cams weekly from Crane's Library of over 80,000 grinds!

Crane Roller cams for Holden's are ALL made from the finest Crane 8620 Chrome Moly Steel Cores. If your Roller cam is not copper plated between the lobes, it's not the best!

Crane Cams are ground in Daytona Beach, Florida USA
